

HEMANG LAKHADIYA

Full Stack Developer | Web & Android Architect

Rajkot, Gujarat, India | lakhadiyahemang@gmail.com | github.com | linkedin.com

PROFESSIONAL SUMMARY

I am a practical, results-driven Full Stack Developer and computer science student currently focused on cross-platform Flutter application development. I have hands-on experience building reliable web systems, interactive mobile software, and custom applications. I possess solid technical skills in backend frameworks like Laravel and PHP, database optimization using MySQL, and constructing modern frontend user interfaces. I am an active team leader who excels at organizing tasks, handling code debugging under pressure, and presenting engineered prototypes clearly.

TECHNICAL EXPERTISE

Backend & APIs:	PHP, Laravel Framework, RESTful API Design, Custom Application Logic, SMTP Email Configuration
Mobile & Cross-Platform:	Flutter, Dart, Cross-Platform App Architecture, Native Android Development (Java), Mobile UI/UX Design
Frontend & UI:	JavaScript, HTML5, CSS3, Tailwind CSS, Bootstrap, Interactive Charts (ChartJS)
Database & Optimization:	MySQL, Storing Procedures, Database Triggers, Query Performance Tuning, Database Scripting

EDUCATION

Master of Computer Applications (MCA) | MARWADI UNIVERISTY

Status: In Progress (Expected 2027) | **Current CGPA: 8.83**

- Core Focus:** Cross-Platform Application Architecture, Advanced Database Tuning, Object-Oriented Software Design, Algorithmic Optimization.

Bachelor of Computer Applications (BCA) | ATMIYA UNIVERISTY

Status: Graduated (2025) | **Final CGPA: 9.32**

- Core Focus:** Relational Database Management Systems (RDBMS), Object-Oriented Programming (OOPs) in Java/C++, Data Structures & Algorithms, Web Foundations.

FEATURED TECHNICAL PROJECTS

Shivashine Jewellery — E-Commerce Platform

Tech Stack: Laravel, PHP, Tailwind CSS, JavaScript, Razorpay API, Google OAuth

- Built a secure, production-ready online store with a smooth user checkout experience.
- Integrated the Razorpay payment gateway for safe transactions and Google Login for quick user sign-ups.
- Developed a fast product catalog system with optimized search filters and real-time inventory adjustments.

Android Financial Calculator & Cognitive Engine

Tech Stack: Android SDK, Java, Mobile UI Components, Multi-Variable Math Algorithms

- Created a native Android application featuring precise financial calculators and a gamified brain training math game.
- Developed and optimized custom Java algorithms to process complex financial calculations instantly without lagging.
- Structured a responsive mental training engine using background threads and countdown timers to track scores accurately.

Automated Taxi Service Manager

Tech Stack: Laravel, PHP, Bootstrap, Relational Query Logic, MySQL

- Designed and launched a full-stack taxi fleet web app to track cars, manage active customer trips, and view driver statuses.
- Built clean database models to handle dynamic fare calculations and automatically prevent overlapping driver shifts.
- Created an easy-to-use admin dashboard with Bootstrap to manage real-time car dispatches and customer bookings.

Shree Shakti Electric Service — Advanced Billing Application

Tech Stack: Flutter, Dart, Responsive Mobile UI Architecture

- Designed and built a responsive cross-platform mobile billing application with a modern and clean user interface.
- Implemented client ledger tracking, digital invoice management, and offline data handling for on-field billing operations.

Automated Class Schedule & Timetable Generator

Tech Stack: Laravel, PHP, Bootstrap, Algorithmic Matrix Logic, MySQL

- Programmed a scheduling engine that automatically generates conflict-free college timetables for multiple departments with a single click.
- Optimized heavy server-side processing to ensure complex scheduling tasks run quickly and smoothly without timing out.

ESBooking — Hybrid Electric Service System

Tech Stack: Native Android (Java), PHP REST APIs, Bootstrap, HTML5, CSS3, MySQL

- Built a two-way service platform with a native Android app for customers to book electricians and track equipment installations from home.
- Developed a central Web Admin Dashboard to assign customer service requests and monitor technician arrivals.

University Certificate Management & Placement Analytics Portal

Tech Stack: Core PHP, TCPDF Library, Bootstrap, JavaScript, MySQL

- Built an academic portal where students upload certificates by category (Sports, Technical, Cultural) to help analyze placement data.
- Created a powerful database filtering system that lets company recruiters instantly find the best-fit candidates during campus hiring rounds based on their extracurricular activities.
- Integrated automated, on-demand PDF certificate generation features using the TCPDF library based on student registration details.

Real-Time Automated Election System

Tech Stack: MySQL, Advanced Database Scripting, Command Line Interface (CLI)

- Designed a highly secure database structure using MySQL triggers to calculate vote results automatically as soon as they are submitted.
- Moved all heavy calculations directly into the database system to remove loading delays and show results instantly on a lightweight terminal interface.

ADDITIONALLY DEVELOPED PORTFOLIO PROJECTS

- **Enterprise Inventory Management System (Laravel, Bootstrap, ChartJS, MySQL)** : Built a stock tracking system with visual charts to provide instant business trends and monthly sales forecasts.
- **Farmer Bidding & Marketplace Platform (PHP, Vanilla JavaScript, HTML5/CSS3)** : Created a student freelance platform where farmers can easily update their crop inventories and buy/sell items through open pricing bids.
- **BPMS — Beauty Parlour Management System (PHP, Bootstrap, MySQL)** : Developed an online portal for customers to look up services and book salon appointments in real-time.
- **Smart Bank Queue Token Manager (Core PHP, JavaScript, SMTP Email Integration)** : Built a digital token app that reduces wait times in lines by pairing online appointment requests with automated email alerts.
- **Garage Operational REST APIs (PHP, Backend API Architecture)** : Wrote clean REST API endpoints to safely add, view, update, and manage vehicle repair tracking sheets.

HACKATHONS & LEADERSHIP EXPERIENCE

4× Hackathon Competitor & Designated Team Leader

National & Collegiate Levels

- Led project planning and code architecture during intense, 24-to-36-hour development sprint cycles across 4 different hackathons..
- Assigned feature tasks to team members, fixed high-priority application bugs, and pitched working software deployments to technical judging panels.
- Streamlined rapid-prototyping workflows to efficiently build, test, and launch fully operational Minimum Viable Products (MVPs) under tight timelines.
